

runtime_error

```
graph BT; A[tlz::failed_assertion] --> B[runtime_error];
```

The diagram illustrates a relationship between two C++ error types. At the bottom is a gray box labeled 'tlz::failed_assertion'. A blue arrow points vertically upwards from this box to a white box at the top labeled 'runtime_error'. This indicates that 'tlz::failed_assertion' inherits from or is a specialization of 'runtime_error'.

tlz::failed_assertion
